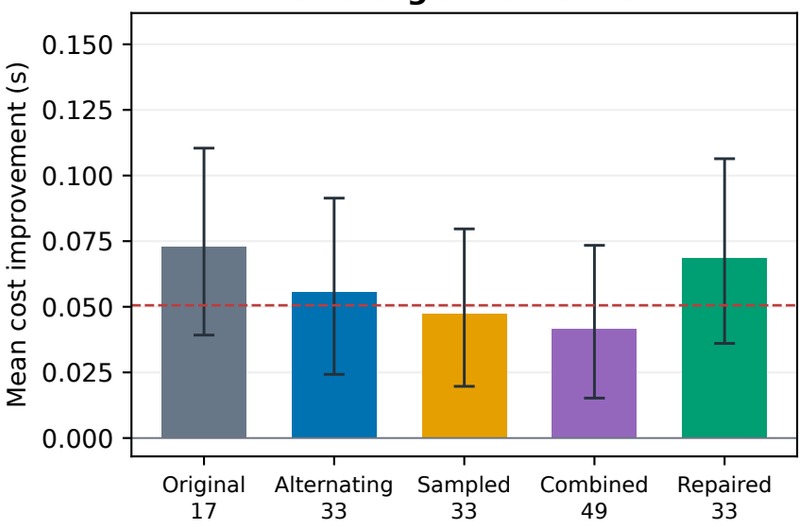
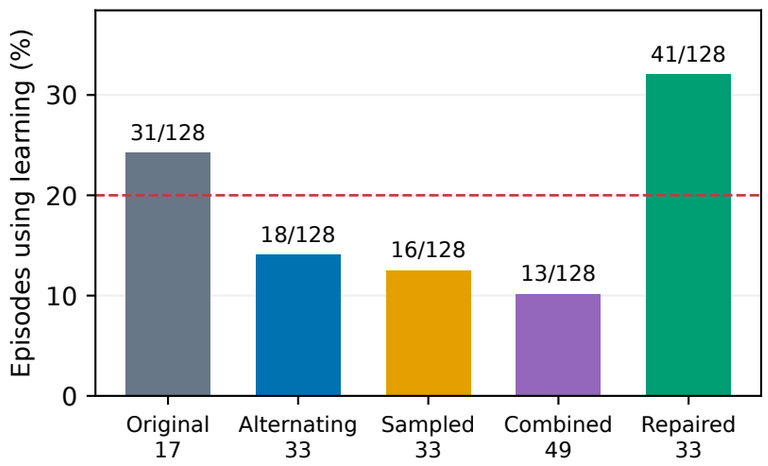
Temporal gating and action repair: complete paired development

128 independent initials; all three models; no risk certification

Training model 1802

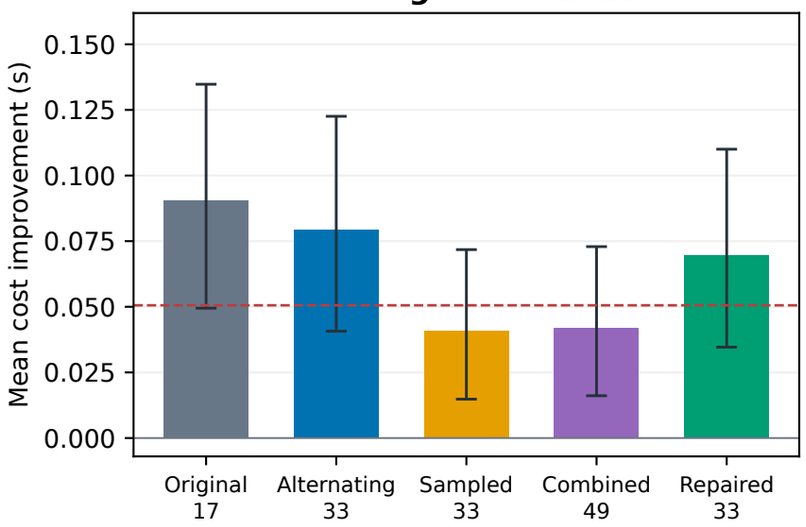


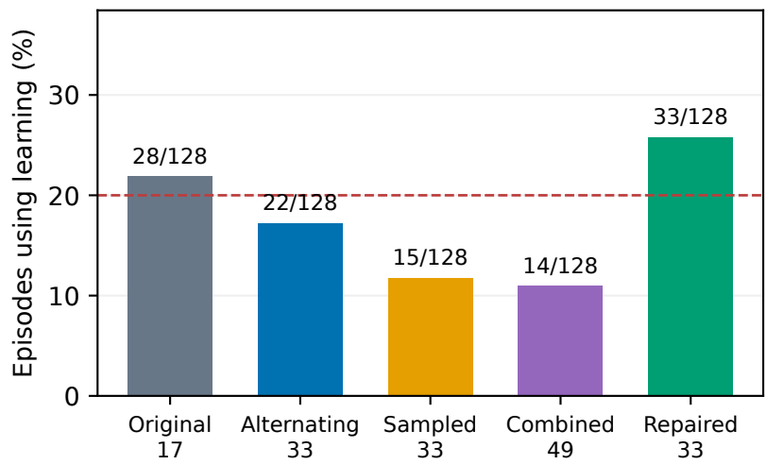


Observed harmful/adopted initials

Gate	Actual H/A	4-mode H/A
Original 17	2/31	6/52
Alternating 33	1/18	2/42
Sampled 33	1/16	3/38
Combined 49	1/13	2/34
Repaired 33	1/41	3/82

Training model 1812

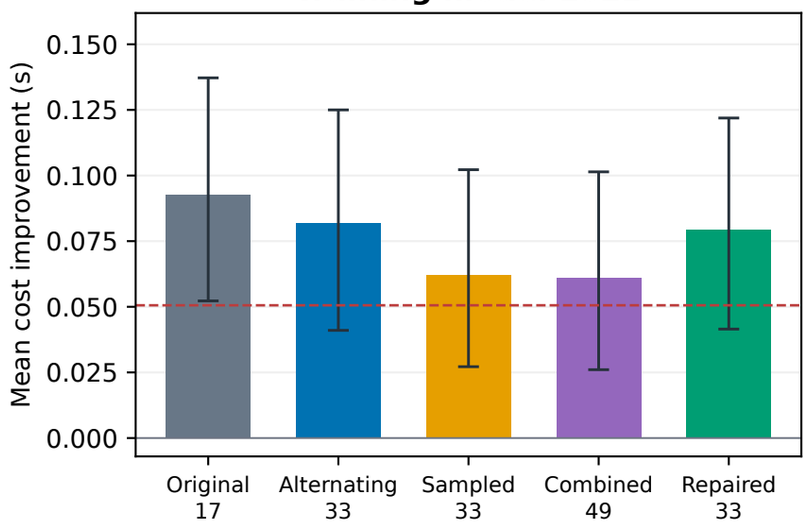


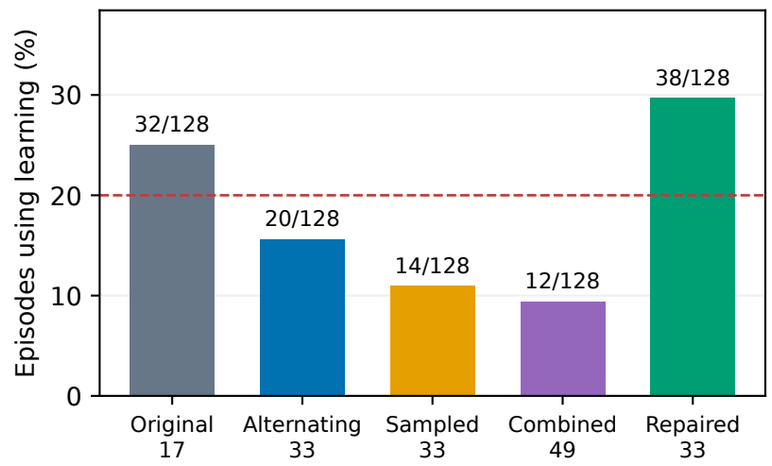


Observed harmful/adopted initials

Gate	Actual H/A	4-mode H/A
Original 17	1/28	4/53
Alternating 33	0/22	2/39
Sampled 33	1/15	2/38
Combined 49	0/14	0/32
Repaired 33	2/33	3/77

Training model 1822





Observed harmful/adopted initials

Gate	Actual H/A	4-mode H/A
Original 17	0/32	2/57
Alternating 33	0/20	2/43
Sampled 33	0/14	1/39
Combined 49	0/12	1/32
Repaired 33	1/38	4/80

Error bars: pointwise 95% paired-initial bootstrap intervals, in seconds.
Dashed: 0.5% of observed baseline cost (top), 20% adoption (middle). Counts share initials.
A=0 would leave conditional risk undefined. Development selection requires fresh calibration and confirmation.
